

# Continuing Professional Development

**Review of  
Geodetic Solutions  
On-line Training  
September 2005**

# Disclosure

---

- The purpose of this presentation is exchange of information to assist members in their professional development
- No endorsement is made by Cain & Barnes, individually, or, as current or past executives of APSG
- No sales commissions or other rewards
- In keeping with APSG, this is not a marketing presentation

# Outline

---

- **The impetus is the need for better self-regulation within the survey industry**
- **Geodetic Solutions formed from Quest, which grew out of University of Newcastle from Paul Cross students**
- **Lead by Martin Rayson and Simon Corbett**
- **Development version of Online Training launched May 05, based on many years of experience**

# Applications

---

- Relevant to general survey industry as a CPD tool
- Oil and Gas Industry audience should be managers, supervisors and field staff responsible for geospatial data acquisition, processing, analysis and reporting
- Organizations should include; oil companies, main contractors, survey companies, consultants and experts associated with geospatial data
- 35 training modules allow customization courses for seismic navigation, rig positioning, hydrographic, ROV operations, site surveys, marine engineering support etc.

# Features and Benefits

---

- **Modules available covering a range of subjects**
- **In this review, two subjects in multiple modules**
  - **Geodesy**
  - **Navigation and Positioning**
- **Two phases**
  - **Training**
  - **Examination**

# Feature and Benefits

---

- Distance learning to save course costs and reduce logistics
- Allows learning and examination at own pace
- Supervisor is assigned for class
- Customized courses can be developed at many levels
- Potential to host other training subjects, e.g. site survey equipment
- On-line product has accuracy, brevity and clarity

# Sample Topics covered

---

**35 training modules are available, for example**

- **Basic Geodesy**
- **Co-ordinate Reference Systems**
- **Datum**
- **Projections**
- **Errors**
- **Least Squares Adjustments**
- **Basic Statistics**
- **Test Statistics**
- **Quality**
- **GPS**
- **DGPS QC**

[QUOTE](#)

What is the difference in accuracy between a three parameter shift and a seven parameter shift

[QUOTE](#)

Mary,

The difference is as follows: When a three parameter transformation is created it only uses the three translation parameters. As such it absorbs the three rotation and one scale parameter into the translation parameters. Therefore, it is inevitable that there will be some degradation of precision when the three parameter transformation is performed. However, the quality of the transformation will also depend upon the transformation model used and the care taken in defining the translation parameters.

Take the parameters issued by the DMA as an example. Within their WGS84 document they publish how many points were used to define the three parameter shift for the country of use and also the expected accuracy on the position

## News

Geodetic Solutions News

September 2005

Michael Barnes from Cain & Barnes, Houston, Texas becomes the first person to successfully complete Geodetic Solutions' online training course in geodesy.

Barnes achieved marks of 70% in Basic Geodesy, 80% in Coordinate Reference Systems and a disappointing 60% in Datums.

Despite over 20 years in the industry, Barnes' limited IT literacy bears testimony to the ease of the site proving that if he can do it - even the Ape Man of the Indus can follow in his footsteps.

Geodetic Solutions provide online training in geodesy, please contact us for further details for affordable, effective, distance learning.

Please do not hesitate to contact Geodetic Solutions for any further details or comments
